

What is claimed is:

1. A structure of formative lighting fixtures, comprising a frame and a plurality of bulbs, in which said frame is substantially a skeleton specifically profiled by gathering a plurality of rods; and said plurality of bulbs is a light source mounted on the skeleton of said frame, and the structure being characterized in that said frame is provided with a refracting layer which is a coating of a transparent material on the skeleton of said frame.
2. The structure according to claim 1, in which said refracting layer is made of a transparent plastic material, such as PVC or acrylic.
3. The structure according to claim 1, in which said refracting layer is made of a transparent vitreous material.
4. The structure according to claim 1, in which said refracting layer is made of a tinted transparent material.
